EDUCATION

RV Institute of Technology and Management, Bangalore, India

B.E in Information Science and Engineering

Expected Graduation: 2027

CGPA: 8.8

RV PU College, Bangalore, India

2021 – 2023

Pre-University (PCMB)

Score: 90%

The Oxford Senior Secondary School (CBSE), Bangalore, India

2011 – 2021

Class I-X

Score: 93.4%

PROJECTS

PhisGuard-AI – AI-Powered Email & URL Phishing Detection System

[GitHub](#)

- Pioneered a real-time phishing detection platform leveraging machine learning and threat intelligence APIs to identify malicious emails, URLs, IP addresses, and domains.
- Designed a feature engineering pipeline with 50+ handcrafted features extracted from headers, URLs, and email content to improve detection accuracy and minimize false positives.
- Trained and evaluated multiple ML models with confidence scoring to detect phishing attempts under real-world conditions.
- Integrated multi-source threat intelligence including VirusTotal, URLScan.io, PhishTank, and Google SafeBrowsing for deep behavioral analysis.
- Built an automated email parsing engine to extract links, headers, sender metadata, and attachments for inspection.
- Implemented Explainable AI (XAI) to surface detection reasoning such as spoofed domains, SPF/DKIM failures, and redirection patterns.

CoinPrepSimulator – Crypto Market Simulation Platform

[GitHub](#)

- Developed an AI-powered crypto trading simulator replicating real market conditions using live price feeds, historical data, and a full-fledged trading engine supporting market, limit, stop-loss, and take-profit orders.
- Built a real-time analytics dashboard with portfolio insights and risk metrics (ROI, Sharpe ratio, volatility, drawdown) to optimize trading strategies.
- Integrated CoinGecko API to stream live cryptocurrency prices and historical data.
- Engineered a RAG-based AI trading assistant (Gemini/Claude + ChromaDB) for personalized trade insights.
- Built a risk profiling system generating personalized scores, allocations, and AI recommendations.

D-CHAT-Decentralised-Chat-Application

[GitHub](#)

- Engineered a decentralized messaging platform leveraging Ethereum, IPFS, and WebRTC, enabling secure peer-to-peer communication with no centralized data storage.
- Implemented wallet-based authentication using MetaMask and deployed Solidity smart contracts on the Sepolia testnet to manage user identity and chat metadata.
- Built real-time 1-on-1 and group messaging with WebRTC, supporting encrypted video/audio calls and direct file transfers.
- Integrated IPFS (Pinata) for decentralized file storage and persistence, ensuring censorship-resistant data sharing.
- Designed end-to-end encryption using AES-256-GCM with PBKDF2 key derivation and SHA-256 hashing for secure message exchange and export/import of chat history.
- Developed a FastAPI-based signaling server for WebRTC connection setup, ensuring minimal centralized dependency (85% decentralized architecture).

SKILLS

Technologies/Frameworks: Flask, Express.js, Node.js, React, Tailwind CSS, JWT, Flutter, Plotly, Spring Framework, Folium, WordCloud

Languages: C, Java, Python, JavaScript, HTML, CSS, SQL

Databases: MySQL, SQLite

Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, spaCy, NLTK

CERTIFICATIONS

Introduction to Software Engineering (IBM_Coursera)

May 2025

Introduction to AI (IBM_Coursera)

Apr 2024

Generative AI: Introduction and Applications (IBM_Coursera)

May 2024

Generative AI: Prompt Engineering Basics (IBM_Coursera)

Apr 2024

Spring 5 Basics (Udwigmann)

ACTIVITIES

Hack-To-Hire : Top 10 Finalist – Hack-to-Hire Hackathon by Trikaya and Beetlex (4,000+ participants)

Google Developer Groups (GDG) on Campus Solution Challenge Participated in Hack2Skill-powered challenge.

NDLI Technical Aptitude Test (RVITM) Achieved 80% score in institute-level exam.

Algholics Coding Club (RVITM) Active member participating in coding events.

Solved 200+ LeetCode Questions
